

CP-SCALE-AU-L002 · all-method search progress, 0-900 s · upper-range detail

Reading the plot

Lines show actual feasible incumbents, held constant until the next observed improvement. Open diamonds show frozen final-only results. Fresh instrumented reruns are labeled observed.

Recorded clock origins

C05/CHILS: native solver elapsed. FJ: native child process elapsed.
FastWVC: conservative outer upper bound. GRASP: position wall time.
StableSolver: conservative outer upper bound.

Early FJ incumbents below 980,000 s are outside this zoom; the full-range companion chart displays them. Clock origins remain method-specific, and 900 s frozen diamonds are budget markers.
